Executive Summary

The Multimodal Level of Service Report, provides level of service analysis for automotive/highway (hereinafter highway), bicycle, pedestrian and transit modes of travel. The latest available highway LOS estimate of all federal aid-eligible functionally classified collector and arterial roadways within the Gainesville Metropolitan Area Boundary is provided in this report. In addition, bicycle, pedestrian and transit levels of service estimates of all functionally classified collector and arterial roadways within the Gainesville Metropolitan Area Boundary are provided in this report. Hereinafter, all references to highway level of service address level of service as described in the 2010 Highway Capacity Manual. For State/County/City-maintained facilities, the report includes the following components:

- Multimodal level of service summary tables [Executive Summary]
- Automotive/highway level of service tables and maps [Chapter II.A];
- bicycle level of service tables and maps [Chapter II.B];
- pedestrian level of service tables and maps [Chapter II.C];
- transit level of service tables and maps [Chapter II.D]; and
- 2015 average annual daily traffic count tables [Chapter III].

The Multimodal Level of Service Report employs a two-tiered level of service roadway facility analysis. Tier One analysis utilizes Florida Department of Transportation's Generalized Tables. Florida Department of Transportation Generalized Tables are contained in an Florida Department of Transportation document entitled 2013 Quality/Level of Service Handbook, including appended issue papers. Tier Two analysis is required for all "distressed" arterials. A "distressed" arterial is one where current highway traffic uses 85 percent or more of the maximum service volume for the adopted level of service for that roadway in Florida Department of Transportation Generalized Tables. Tier Two analysis, which utilizes Florida Department of Transportation LOSPLAN software, is performed for all "distressed" arterials. The LOSPLAN software package includes three programs:

- ARTPLAN, which analyses interrupted flow (signalized) roadway facilities;
- HIGHPLAN, which analyses uninterrupted flow (unsignalized) roadway facilities; and
- FREEPLAN, which analyses uninterrupted flow and limited access (unsignalized) roadway facilities.

Detailed analysis using Florida Department of Transportation FREEPLAN software is performed for all "distressed" limited-access arterials. These analyses are done to develop a more accurate level of service estimate than can be obtained using Florida Department of Transportation Generalized Tables. ARTPLAN, HIGHPLAN or FREEPLAN, as appropriate, are also used to estimate the amount of service volume that the road actually has at a given level of service. ARTPLAN provides a more accurate estimate of an arterial's service volume than can be obtained using the Florida Department of Transportation Generalized Tables. Roadway facilities that are operating at an unacceptable level of service are identified in Exhibit 1. The level of service analysis is for operational performance based on the 2010 Highway Capacity Manual level of service criteria.

Bicycle, pedestrian and transit levels of service analyses also employ a two-tiered approach. Those facilities for which the highway level of service is analyzed using the Florida Department of Transportation Generalized Tables, are also analyzed for bicycle, pedestrian and transit level of service using the Florida Department of Transportation Generalized Tables default values in LOSPLAN. Those facilities for which the highway level of service is analyzed using Florida Department of Transportation LOSPLAN software, are also analyzed for bicycle, pedestrian and transit level of service using Florida Department of Transportation LOSPLAN software.

Exhibit 1 Roadway Facilities Operating at an Unacceptable Highway Level Of Service

Roadway Facility	From	To	2014 AADT	2014 LOS	2015 AADT	2015 LOS	2015 MSV
SW 13 Street [US 441] (S-3)	Archer Road	University Avenue	35,500	F	35,500	F	16,380
Newberry Road [SR 26] (S-14)	NW 122 Street	Interstate 75 [west ramp]	39,500	F	39,000	F	16,380
University Avenue (S-17)	NW 34 Street	Gale Lemerand Drive	16,078	F	24,500	F	14,040
NW 34 Street [SR 121] (S-25)	University Avenue	NW 16 Avenue	18,150	F	18,300	F	16,380
Archer Road [SR 24] (S-47)	GMA Boundary	SW 75 Street	20,000	F	18,800	F	17,010
NW 23 Avenue (A-9)	NW 98 Street	NW 55 Street	16,078	F	16,078	F	14,040
SW 75 Street / Tower Road (A-13)	Archer Road	SW 8 Avenue	17,089	F	16,515	F	14,040
SW 20 Avenue (A-15)	SW 75 Street	SW 62 Boulevard	16,868	F	17,913	F	14,040
SW 20 Avenue (A-16)	SW 62 Boulevard	SW 34 Street	25,415	F	23,706	F	14,040
N Main Street (A-17)	N 8 Avenue	N 16 Avenue	15,976	F	15,976	F	14,740
NW 39 Avenue (A-19)	NW 110 Terrace	NW 98 Street	21,248	F	17,155	F	14,040
NW 83 Street (A-23)	NW 23 Avenue	NW 39 Avenue	15,976	F	18,330	F	14,740
SW 62 Boulevard (G-42)	SW 20 Avenue	NW 1 Place	18,544	F	18,544	F	14,040

Note: Unacceptable operating performance is based on the 2010 Highway Capacity Manual level of service A to F scale
AADT = average annual daily traffic, GMA = Gainesville Metropolitan Area, LOS = level of service, MSV = maximum service volume

Exhibits 2, 3 and 4 show multimodal level of service summaries for the state-maintained, county-maintained and city-maintained facilities respectively. For selected urbanized area and transitioning area facilities serving low density development, an outside transit service area (OTSA) designation is used instead indications of unacceptable pedestrian level of service.

Congestion Management Process

The Multimodal Level of Service Report is updated at least annually. This monitoring system is a key component for prioritizing bicycle facility, pedestrian facility, roadway facility and transit projects that address congestion management, in the Long Range Transportation Plan and Transportation Improvement Program. This report is intended to address the Fixing America's Surface Transportation (FAST) Act and Florida Statutes Chapter 339.177(2) congestion management process requirements.

Chapter I

Introduction

This Page Left Blank Intentionally

Chapter I: Introduction

The Metropolitan Transportation Planning Organization for the Gainesville Urbanized Area Annual Average Daily Traffic (AADT)/ Multimodal Level of Service Report (Multimodal Level of Service Report) is composed of level of service maps and tables of state-maintained, county-maintained and city-maintained federal aid-eligible roadways. This reference to multimodal level of service addresses automotive/highway, bicycle facility, pedestrian facility and transit levels of service as described in the 2010 Highway Capacity Manual. This report contains the the results of multimodal levels of service analyses and the automotive/highway maximum service volume for arterials, collectors functioning as arterials, transitioning arterials and collectors, major nonstate roads and other nonstate roads within the Gainesville Metropolitan Area Boundary. Illustration I shows the Gainesville Metropolitan Area as defined by Chapter 339.175(1)(c), Florida Statutes. Level of service and maximum service volume methodology utilizes a two-tiered approach. For State/County/City-maintained facilities, the Multimodal Level of Service Report includes the following components:

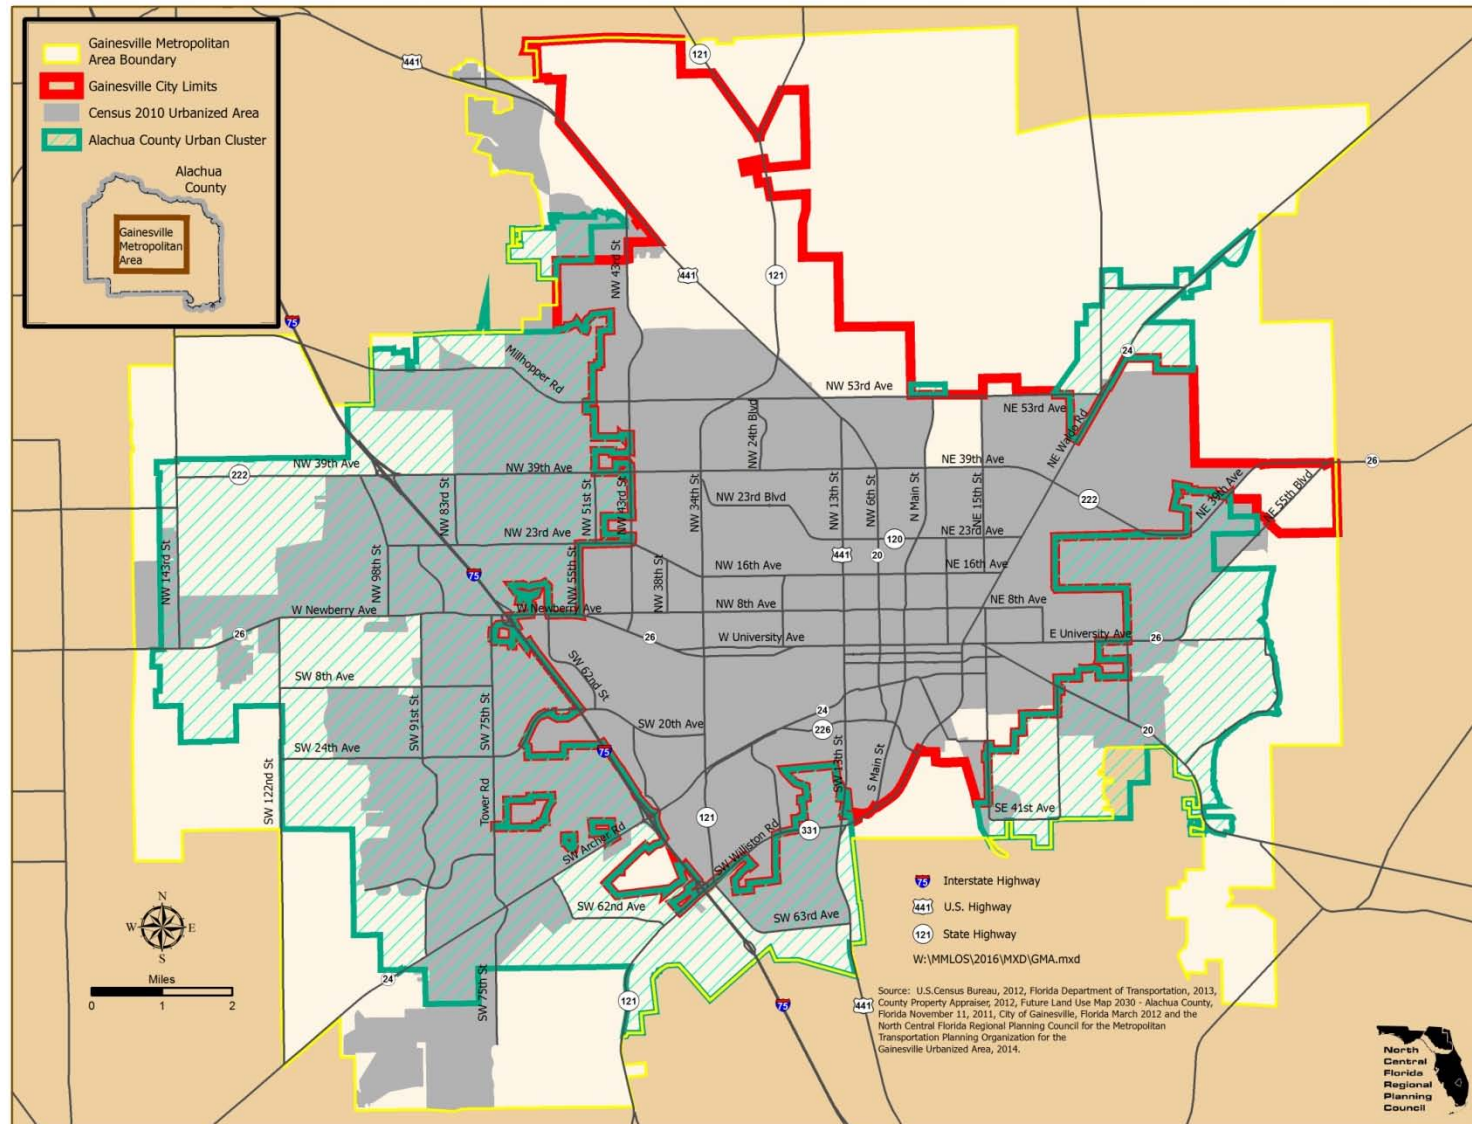

- multimodal level of service summary tables [Executive Summary]
- automotive/highway level of service tables and maps [Chapter II.A];
- bicycle level of service tables and maps [Chapter II.B];
- pedestrian level of service tables and maps [Chapter II.C];
- transit level of service tables and maps [Chapter II.D]; and
- 2015 average annual daily traffic count tables [Chapter III].

Tier One Level of Service/Maximum Service Volume Analysis uses the Florida Department of Transportation Generalized Tables contained in the latest edition of the Florida Department of Transportation Quality/Level of Service Handbook to determine roadway level of service and maximum service volume. The 2013 Quality/Level of Service Handbook. Tier One Level of Service/Maximum Service Volume Analysis is acceptable for use in the Gainesville Metropolitan Area for all roadways with less than 85 percent of the Florida Department of Transportation Generalized Tables maximum service volume for the adopted level of service.

Tier Two Level of Service/Maximum Service Volume Analysis uses the Florida Department of Transportation analytical software which accompanies the 2013 Quality/Level of Service Handbook to determine roadway level of service and maximum service volume. Florida Department of Transportation analytical software is used when more sophisticated analysis is necessary. These analytical tools have varying requirements for field-collected data. Tier Two Level of Service/Maximum Service Volume Analysis is required for use in the Gainesville Metropolitan Area for all roadways with 85 percent or more of the Florida Department of Transportation Generalized Tables maximum service volume for the adopted level of service. A detailed analysis using Florida Department of Transportation FREEPLAN software is to be performed for all "distressed" limited-access arterials.

This report also contains estimates of bicycle, pedestrian and transit level of service for arterials, collectors functioning as arterials, transitioning arterials and collectors, major nonstate roads and other nonstate roads within the Gainesville Metropolitan Area Boundary. Bicycle, pedestrian and transit level of service methodology also utilizes a two-tiered approach. Those facilities for which the highway level of service is analyzed using the Florida Department of Transportation Generalized Tables, are also analyzed for bicycle, pedestrian and transit level of service using the Florida Department of Transportation Generalized Tables default inputs in LOSPLAN. Those facilities for which the highway level of service is analyzed using Florida Department of Transportation LOSPLAN software, are also analyzed for bicycle, pedestrian and transit level of service using Florida Department of Transportation LOSPLAN software.

Chapter I - Introduction

A. Purpose

The primary purpose of this report is to provide an estimate of roadway level of service possible for each state-maintained arterials, city and county collectors functioning as arterials, transitioning arterials or collectors, major nonstate roads and other nonstate roads within the Gainesville Metropolitan Area Boundary. All roadways are analyzed using Florida Department of Transportation Generalized Tables.

The purpose of providing bicycle, pedestrian and transit level of service, in addition to the automotive/highway level of service, is to inform and educate the Metropolitan Transportation Planning Organization for the Gainesville Urbanized Area, Alachua County and City of Gainesville elected officials and staffs, as well as, the public at-large regarding the Gainesville Metropolitan Area's multimodal transportation system and to provide a mechanism to monitor the implementation of the Livable Community Reinvestment Plan.

The Multimodal Level of Service Monitoring Program is a component of the Traffic Congestion Management System within the Gainesville Metropolitan Area that is required by Chapter 339.177(2), Florida Statutes.

B. Scope of Study

The analysis of all Florida Department of Transportation -functionally classified roadways within the Gainesville Metropolitan Area Boundary which are classified higher than local roads are included in this report. Tables 1 through 3 show the data gathered and the automotive/highway analysis results for all roadways studied. Level of service data is graphically shown in Illustrations II through V for all arterials, collectors functioning as arterials and collectors.

Roadways which, when analyzed using the Florida Department of Transportation Generalized Tables, use 85 percent or more of the maximum service volume at the minimum acceptable level of service, are identified as "distressed."

Tables 4 through 6 consist of the bicycle level of service summary. Illustration VI shows the bicycle level of service. Tables 7 through 9 consist of the pedestrian level of service summary. Illustration VII shows the pedestrian level of service. Tables 10 through 12 consist of the transit level of service summary. Illustration VIII shows the transit level of service.

C. Results

Automotive/Highway level of service data for each roadway facility are provided for State-maintained, Alachua County-maintained and City of Gainesville-maintained roads within the Gainesville Metropolitan Area boundary. Tables 1-A and 1-B through Tables 3-A and 3-B provide median Annual Average Daily Traffic counts and Florida Department of Transportation Generalized Tables, ARTPLAN, HIGHPLAN or FREEPLAN level of service data for these roads, maximum service volumes, laneage, signal density, median and/or left turn adjustments and adopted level of service standards for these roads.

Tables 1-A and 1-B provide the automotive/ highway level of service and maximum service volume for the State-maintained arterials, Tables 2-A and 2-B provide the automotive/ highway level of service and maximum service volume for the Alachua County-maintained roads and Tables 3-A and 3-B provide the automotive/ highway level of service and maximum service volume for the City of Gainesville-maintained

roads. The roads are labeled S (State), A (Alachua County) or G (City of Gainesville) and an assigned arterial number. For example, S-4 is the designation of U.S. 441 from State Road 26 (University Avenue) to NW 29 Road. Roadway facilities which are part of the Strategic Intermodal System, Florida Intrastate Highway System, Metropolitan Transportation Planning Organization for the Gainesville Urbanized Area-designated multimodal corridors or are within a local government comprehensive plan-designated transportation mobility managed area are identified in the level of service tables.

In addition, Tables 4 through 12 provide multimodal levels of service by facility for, bicycle, pedestrian and transit modes. Tables 4, 7 and 10 provide the bicycle, pedestrian and transit levels of service, respectively, for the State-maintained arterials, Tables 5, 8 and 11 provide the bicycle, pedestrian and transit levels of service, respectively, for the Alachua County-maintained roads and Tables 6, 9 and 12 provide the bicycle, pedestrian and transit levels of service, respectively, for the City of Gainesville-maintained roads.

Chapter II: Level of Service Analysis Results

A. Automotive/Highway

Illustration II shows the overall Gainesville Metropolitan Area automotive/highway level of service of federal aid-eligible facilities.

For State of Florida-maintained and federal aid-eligible facilities:

- Illustration III shows the Gainesville Metropolitan Area automotive/highway level of service; and
- Tables 1-A and 1-B identify the overall Gainesville Metropolitan Area automotive/highway level of service.

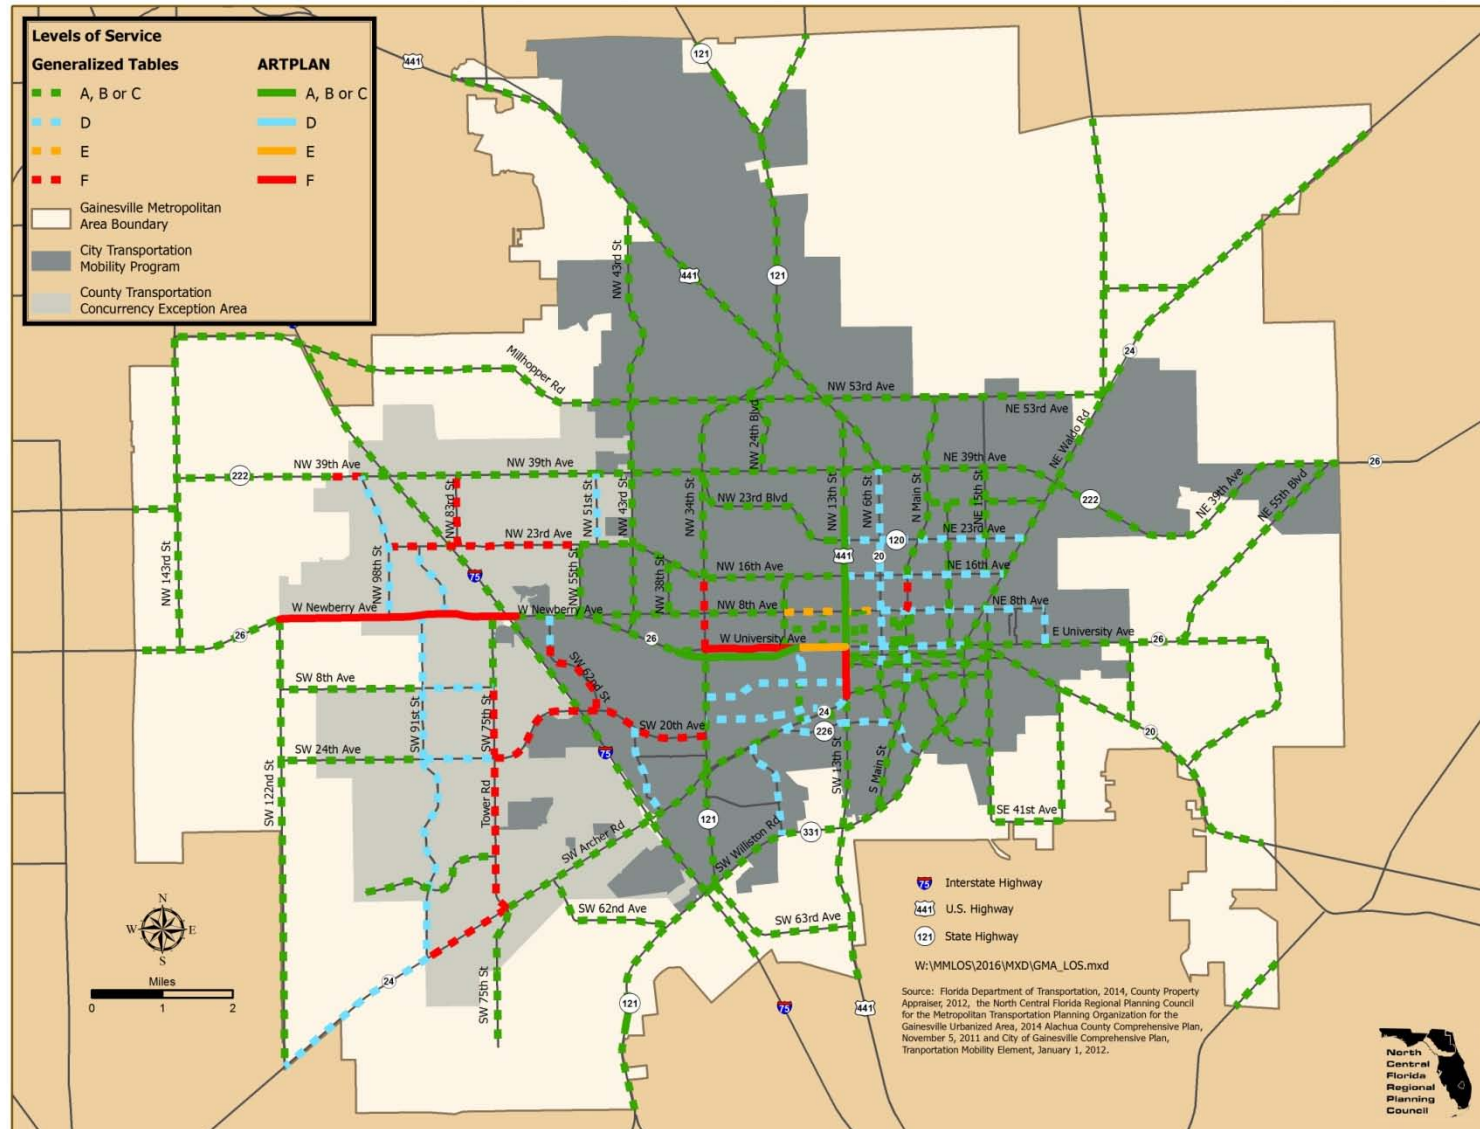

For Alachua County-maintained and federal aid-eligible facilities:

- Illustration IV shows the Gainesville Metropolitan Area automotive/highway level of service; and
- Tables 2-A and 2-B identify the overall Gainesville Metropolitan Area automotive/highway level of service.

For City of Gainesville-maintained and federal aid-eligible facilities:

- Illustration V shows the Gainesville Metropolitan Area automotive/highway level of service; and
- Tables 3-A and 3-B identify the overall Gainesville Metropolitan Area automotive/highway level of service.

\\mike\los\los16\multimodal\15cdatan_8.xls

**Notes For Tables 1, 2 and 3
Automotive/Highway Level of Service Data
within the Gainesville Metropolitan Area Boundary**

TABLE	NOTE	DESCRIPTION
1,2,3	A	<u>Constrained</u> means that it is not feasible to add through lanes to meet current or future traffic needs due to physical, environmental or policy constraints.
1,2		<u>SIS</u> - Roadway facility is part of the Florida Strategic Intermodal System or an Strategic Intermodal System Connector. These facilities are subject to the Florida Department of Transportation's adopted level of service standards in accordance with Procedure No. 525-000-006, Topic 525-000-006a.
1		<u>FIHS</u> - Roadway facility is part of the Florida Intrastate Highway System.
1,2		<u>Multimodal Corridor</u> is a roadway within the Gainesville Metropolitan Area which has been identified in the <u>Gainesville Multimodal Corridor and Park and Ride Study</u> for multimodal use.
1,2,3	B	Number of lanes is the number of lanes continuing through a signalized intersection.
1,2,3	C	Roadway Class identifies the corridor analysis category in the revised Florida Department of Transportation Generalized Tables (December 18, 2012) of the <u>2013 Quality/Level of Service Handbook</u> .
1,2,3	D	Adjustments relate to the use of the Florida Department of Transportation Generalized Tables.
1,2,3	E	Minimum acceptable highway level of service (LOS) standards are established in local government comprehensive plans and apply to facilities within their respective jurisdictions regardless of the entity responsible for maintaining the facility. Alachua County utilizes areawide level of service standards.
1,2,3	F	Maximum service volumes for the minimum acceptable highway level of service are reported for two levels- Tier One FDOT Generalized Tables for "non-distressed" facilities and Tier Two FDOT LOSPLAN for "distressed" facilities.
1,2,3		<u>Tables</u> - these Florida Department of Transportation Generalized Tables volumes are based on statewide averages and may not reflect local conditions. These tables are used as a preliminary estimate and are considered sufficiently accurate for arterials where the average annual daily traffic (AADT) counts do not exceed 65% of the Generalized Tables service volume.
2		Roadway Facility S-17 is analyzed as a three-lane roadway in which the Generalized Tables service volumes for two- and four-lane roadways were averaged to estimate three-lane service volumes.
1,2,3		<u>Calculated</u> - ARTPLAN, FREEPLAN and/ or HIGHPLAN are computer programs which provide a more accurate maximum service volume by allowing the use of local data in the analyses. These programs are used to estimate the service volume on arterials when the traffic counts exceed 65 percent of the Generalized Tables maximum service volume. [Updates of ARTPLAN files were suspended by the Level of Service Subcommittee in 2008]
1,2,3		<u>Negotiated</u> - service volumes set by agreements with the Florida Department of Transportation and/or Department of Economic Opportunity in areas which are established as special transportation areas, such as Transportation Mobility Program Areas, or on facilities which are designated as constrained.

Notes For Tables 1, 2 and 3 (Continued)
Automotive/Highway Level of Service Data
within the Gainesville Metropolitan Area Boundary

TABLE	NOTE	DESCRIPTION
1,2,3	G	<p><u>AADT</u> - Tier One-analyzed facilities uses the median of the three most recent annual traffic counts at each count station, then the median volume of the traffic count station median volumes is defined as the roadway facility average annual daily traffic (AADT). Tier Two-analyzed facilities uses the median of the three most recent annual traffic counts for each SEGMENT average annual daily traffic (traffic count nearest the traffic signal for the approach analyzed) are used in the calculation of the facility average annual daily traffic. For ARTPLAN 2012 analyses, the traffic volume at the "sensitive" (usually the highest volume to capacity (v/c) ratio) SEGMENT is reported as the roadway facility average annual daily traffic. In instances when a field study is conducted, then that single-year seasonal factor and axle factor-adjusted volume is reported as the roadway facility average annual daily traffic. In cases where the ratchet method for maximum service volume (MSV) calculation generates an available service volume greater than that calculated by ARTPLAN 2012, then AADT=MSV-ASV (available service volume). [In 2008, the LOS Subcommittee decided to use the latest year count rather than the three year median count and suspended Tier Two analyses during the installation of the Traffic Management System project.]</p> <p>1 For Florida State Highway System roadways, the volumes are taken from the Florida Department of Transportation 2015 Traffic information compact disk.</p> <p>2 For Alachua County roadways, the latest unfactored counts taken when the University of Florida, Santa Fe Community College and public schools are in session are used to determine current traffic.</p> <p>3 For City of Gainesville roadways, the latest [year 2013, 2014 or 2015] unfactored counts taken when the University of Florida, Santa Fe Community College and public schools are in session are used to determine current traffic.</p> <p>2,3 City and County arterials were analyzed using the Non-State service volume classifications as described in the <u>2013 Quality/Level of Service Handbook</u>.</p>
1,2,3	H	<p><u>Tables</u> - FDOT Generalized Tables analyses for urban and transitioning areas.</p>
1,2,3		<p><u>ARTPLAN</u> - software used to estimate arterial highway level of service which replicates the calculations shown in the <u>2010 Highway Capacity Manual</u>. Highway LOS of arterials which have median AADT counts which exceed 85 percent of the Generalized Tables service volume at the minimum acceptable highway LOS were analyzed using ARTPLAN.</p>
1		<p><u>FREEPLAN</u>, software used to estimate limited-access (freeway) highway level of service, was used to analyze limited-access highways which exceed 85% of the Generalized Tables service volume at the minimum acceptable highway level of service.</p>
1		<p><u>HIGHPLAN</u>, software used to estimate urban 2-lane highway level of service, was used to analyze urban 2-lane highways which exceed 65% of the Generalized Tables service volume at the minimum acceptable highway level of service.</p>
1,2,3	I	<p><u>Urbanized Areas</u> are the 2010 urbanized areas designated by the U.S. Bureau of Census as well as the surrounding geographical areas as agreed upon by the Florida Department of Transportation, the Metropolitan Transportation Planning Organization and the Federal Highway Administration.</p>
1,2	J	<p><u>Transitioning Areas</u> are the areas outside urbanized areas that are planned to be included within the urbanized areas within the next 20 years based primarily on the U.S. Bureau of Census urbanized criteria of a population density of at least 1,000 people per square mile.</p>

B. Bicycle, Pedestrian and Transit

Illustration VI shows the overall Gainesville Metropolitan Area bicycle level of service of federal aid-eligible facilities. For State of Florida-maintained and federal aid-eligible facilities, Table 4 identifies the overall Gainesville Metropolitan Area bicycle level of service. For Alachua County-maintained and federal aid-eligible facilities, Table 5 identifies the overall Gainesville Metropolitan Area bicycle level of service. For City of Gainesville-maintained and federal aid-eligible facilities, Table 6 identifies the overall Gainesville Metropolitan Area bicycle level of service.

Illustration VII shows the overall Gainesville Metropolitan Area pedestrian level of service of federal aid-eligible facilities. For State of Florida-maintained and federal aid-eligible facilities, Table 7 identifies the overall Gainesville Metropolitan Area pedestrian level of service. For Alachua County-maintained and federal aid-eligible facilities, Table 8 identifies the overall Gainesville Metropolitan Area pedestrian level of service. For City of Gainesville-maintained and federal aid-eligible facilities, Table 9 identifies the overall Gainesville Metropolitan Area pedestrian level of service.

Illustration VIII shows the overall Gainesville Metropolitan Area transit level of service of federal aid-eligible facilities. For State of Florida-maintained and federal aid-eligible facilities, Table 10 identifies the overall Gainesville Metropolitan Area transit level of service. For Alachua County-maintained and federal aid-eligible facilities, Table 11 identifies the overall Gainesville Metropolitan Area transit level of service. For City of Gainesville-maintained and federal aid-eligible facilities, Table 12 identifies the overall Gainesville Metropolitan Area transit level of service.

C. Roadway Facilities Operating at an Unacceptable Level of Service

Illustration IX shows the roadway facilities that are operating at an unacceptable level of service, based on 2015 traffic counts for State of Florida-maintained, Alachua County-maintained and City of Gainesville-maintained facilities. Exhibit II-1 identifies the sensitive intersection for each ARTPLAN-analyzed facility. A sensitive intersection is the intersection for which its performance causes the facility to operate at an unacceptable level of service. Therefore, the maximum service volume for the sensitive intersection is the maximum service volume for the facility.

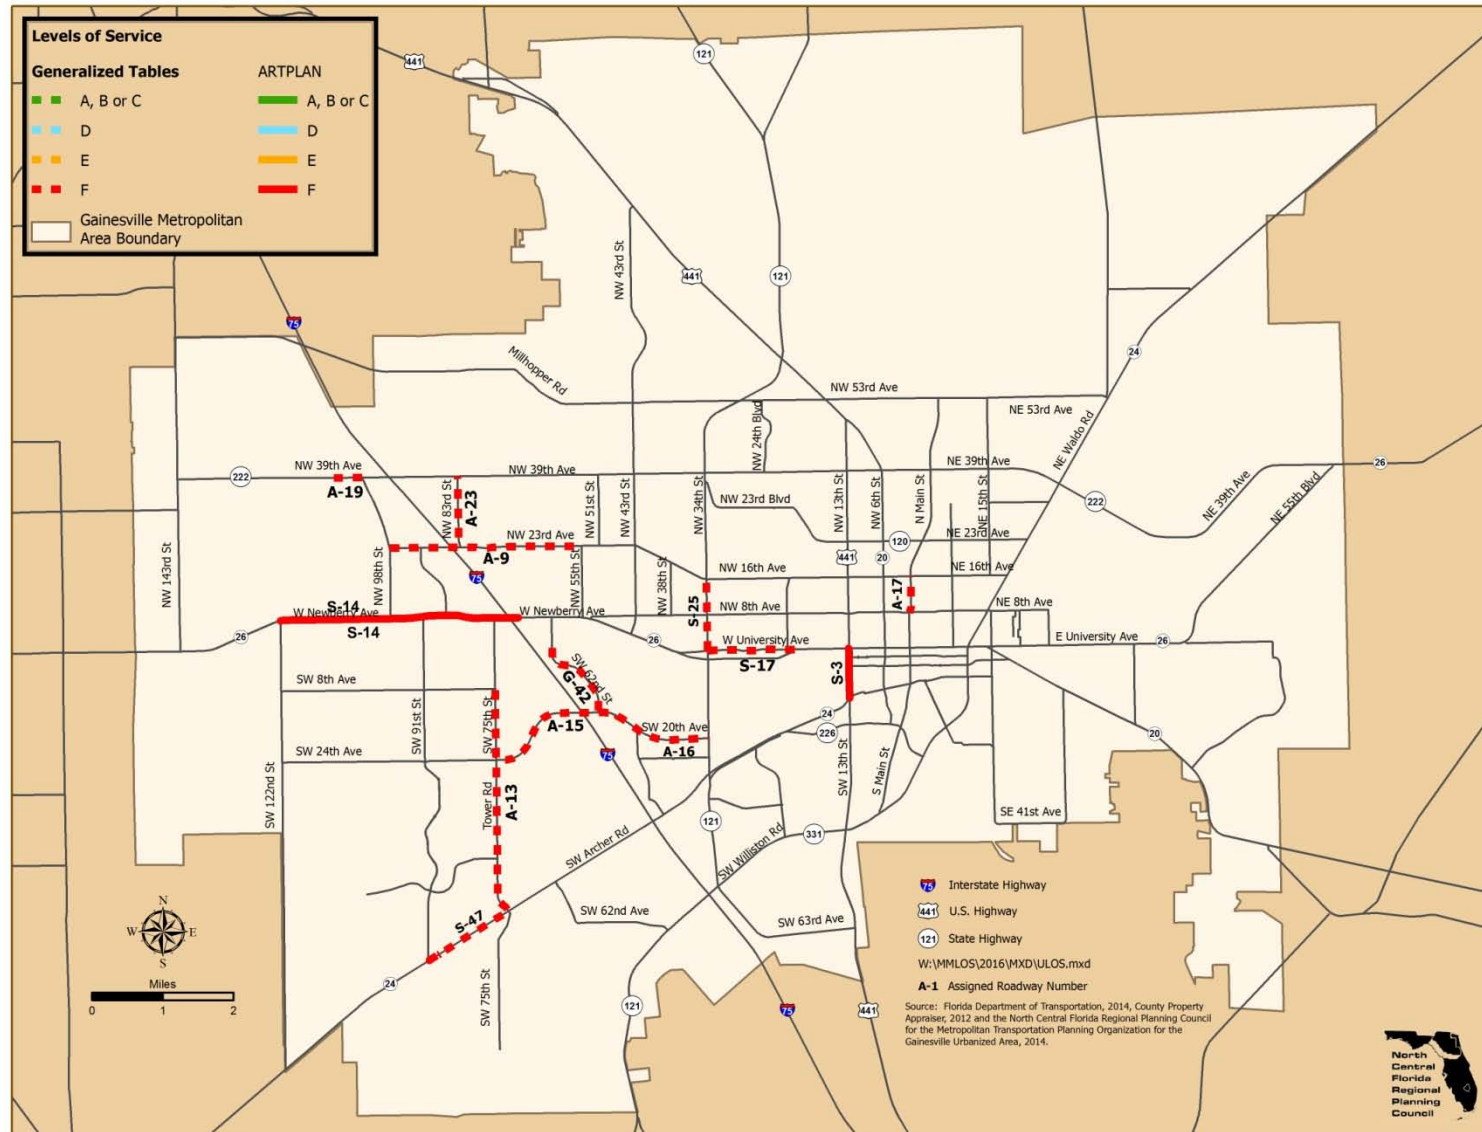

Exhibit II-1
Sensitive Intersection with High Congestion

Roadway Facility	From	To	Sensitive Intersection	2015 AADT	G/C	2015 LOS	V/C
SW 13 Street [US 441] (S-3)	Archer Road	University Avenue	University Avenue	35,500	0.34	F	1.096

Chapter III: Median Average Annual Daily Traffic Counts

This chapter includes the median average annual daily traffic counts for roadway facilities within the Gainesville Metropolitan Area. Exhibit III-1 shows the median average annual daily traffic counts for state-maintained facilities. Exhibit III-2 shows the median average annual daily traffic counts for Alachua County-maintained facilities. Exhibit III-3 shows the median average annual daily traffic counts for City of Gainesville/University of Florida-maintained facilities.
